Subject: opposition to nuclear waste shipment. Glendale, Mo.

Part of Records Package / Supplement / Correction

There is a railroad track 1/2 mile from our home in the heart of Webster Groves, Missouri that would carry volatile waste every other day for 25 to 30 years should complete disregard for the future prevail in the actions of those considering any kind of transport of nuclear waste. Put the stuff up in the middle of central park as a tribute to the years of electricity we are so grateful for and willing to sacrifice so much for. Perhaps then more people will rise up and demand the use of solar power technology that we've been capable of for 20 years now and get these greedy oil monsters out of our government where they are prompting terrorist attacks from stealing other country's resources. I pray for peace and healing and a new action for a sensible government that is by for and of the people not monied interests. Thankyou.
